

The background of the entire page is a low-angle, upward-looking photograph of a modern glass skyscraper. The grid of window frames creates a strong sense of perspective and depth. The sky is a pale, overcast grey. The image is decorated with several geometric shapes: blue triangles of various sizes and orientations, and white and yellow circles, some of which are partially cut off by the edges of the page.

# MUFADDAL GLASS CATALOGUE

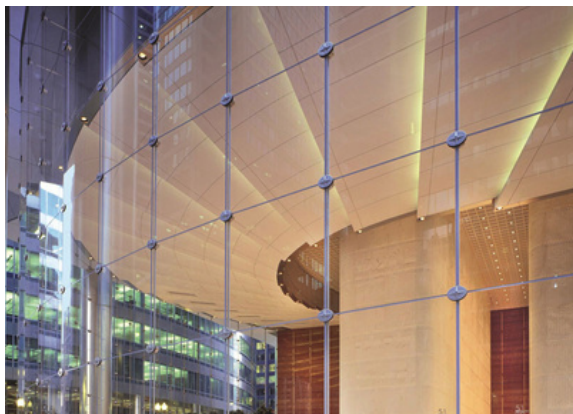

## TINTED FLOAT GLASS

Tinted float glass is a special type of clear float glass that gets a colored tint added during manufacturing. The tint doesn't just look stylish, it actually blocks some sunlight and heat from coming through the windows. This helps keep your building cooler and reduces harsh sun glare. It comes in a variety of colors, so you can pick the perfect shade to match the look and functionality you desire for your space.

## PATTERNED GLASS

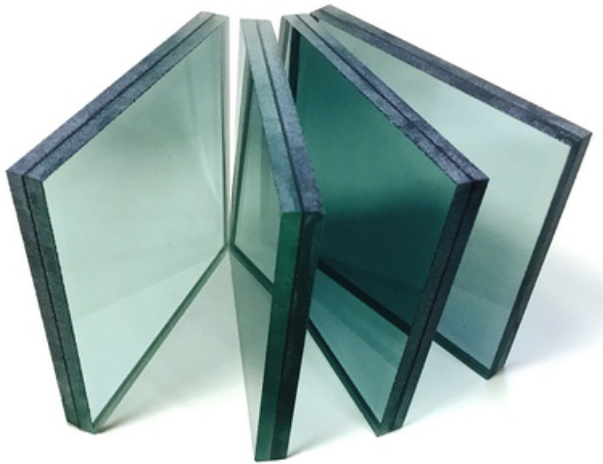

Patterned glass features intricate designs or textures on its surface. These patterns serve both functional and decorative purposes. The textured surface diffuses light, providing privacy while allowing natural illumination. This adds character to windows, doors, partitions, and other architectural elements.

## REFLECTIVE GLASS

Reflective glass is a type of clear or tinted glass with a special metallic coating. This coating reflects a significant portion of sunlight and heat back outside, keeping the interior cooler and reducing glare. While the coating reflects light outwards, it still allows people inside to see out through the glass. This combination of heat reduction, glare control, and outward visibility makes reflective glass a popular choice for modern architecture and energy-efficient buildings.

## LAMINATED GLASS

Laminated glass is a type of safety glass made by bonding two or more pieces of glass together with a thin layer of tough plastic in between. This plastic layer holds the glass in place even if it breaks, preventing it from shattering into sharp pieces. This makes laminated glass ideal for situations where safety is a major concern, like car windshields, skylights, and windows in areas prone to strong winds or impacts. The plastic layer can also help reduce some noise, making it useful for noisy environments.

## CLEAR FLOAT GLASS

Made using a special floating technique, clear float glass has a smooth, flat surface that lets a lot of light shine through. Unlike some older glass, it's almost invisible, with just a hint of green. Because you can see right through it so well, this glass is perfect for windows, store displays, and anywhere you want a clean, unobstructed view.

## FRAMELESS FITTINGS

Frameless patch fittings are small metal brackets that clamp onto glass panels, holding them securely in place without bulky frames. This creates a sleek, minimalist look that lets the glass itself be the star. Patch fittings come in various styles for different applications, like hinges for doors or supports for glass walls and railings. They're a great way to add a touch of modern sophistication while keeping things clean and functional.

## FRAMELESS PARTITIONS

Frameless glass partitions are a modern way to divide rooms without using heavy frames. These partitions are made of thick glass panels held securely in place by special clamps. This creates a clean, minimalist look that lets in lots of natural light and makes even small spaces feel bigger. Frameless partitions can be used in homes and offices to separate areas while keeping them bright and airy. They're also easy to clean because they have no frames to trap dust.

## MIRRORS

Mirrors are used in many ways: in bathrooms to check your appearance, in wardrobes to see your outfit, or even on walls to make a room look bigger. They can also be decorative, with different shapes, frames, and even tinting.

## ALUMINIUM

Aluminium is the superstar material for modern doors and windows. It's super lightweight, so it's easy to install and won't weigh down your building. Plus, unlike wood, it resists rust and won't rot, so you can pretty much forget about maintenance. Aluminium is also a shape-shifter, allowing for all sorts of cool designs.

## FRAMELESS FITTINGS

Frameless patch fittings are small metal brackets that clamp onto glass panels, holding them securely in place without bulky frames. This creates a sleek, minimalist look that lets the glass itself be the star. Patch fittings come in various styles for different applications, like hinges for doors or supports for glass walls and railings. They're a great way to add a touch of modern sophistication while keeping things clean and functional.

## BULLET PROOF GLASS

Bulletproof glass, also called ballistic glass, is made with layers of super strong plastic and glass, and it can slow down or even stop bullets depending on their strength. This special glass offers clear visibility while adding a powerful security layer to banks, stores, and even homes that need extra protection.
